Caballero Rivista Il Caballero.Q: MySQL: Create or replace tbl on existing table I have a table for movies, it has a column for rating with type tinyint(3). I want to create a new table for a subset of this, in which there is one more column called 'new rating' and type float. When doing the following it works: CREATE TABLE `movies\_new` LIKE movies; But when I try to use it, it returns an error: ALTER TABLE `movies\_new` DROP COLUMN `new rating`; ALTER TABLE `movies\_new` DROP COLUMN `rating`; DROP TABLE `movies`; And table movies_new doesn't have any columns. How do I get around this? A: You can't alter a table while it is in use. You need to use ALTER TABLE... DROP COLUMN... first, then ALTER TABLE... ADD COLUMN... afterwards. Use the following in your example: ALTER TABLE `movies\_new` ADD COLUMN `new rating` DOUBLE(5,2); Q: A tableView is not updating its cells properly I am creating a UITableViewCell that in the cellForRowIndexPath, I am using a library called SOFA. So, in the cellForRowIndexPath, I want to update the cell's label using the SOFA library. Here is my code in the cellForRowIndexPath: -(UITableViewCell *)tableView:(UITableView *)tableView cellForRowAtIndexPath:(NSIndexPath *)indexPath { NSDictionary *itemDetails=[arrSelectedItem objectAtIndex:indexPath.row]; id tmp=[self sd_objectForKey:@"searchedContents"]; if (tmp!=nil
