- Full disclosure address removed - Orion NPM version 9.6 is shipped with Oracle Support account in order to download the Oracle Support, you need to be logged in as an Oracle Support account holder. If you are unsure how to obtain an Oracle account, contact Oracle Support. Any feedback, comments, suggestions, issues, or questions about this product or any of its related support materials is always welcome. Thank you! For more information about Sun ONE v9.0 or Orion NPM visit: The SolarWinds Network Performance Monitor (NPM) is a powerful network monitoring solution. The NPM provides extremely detailed monitoring and reporting for network performance and traffic data, allowing administrators to understand the performance of their network health. NPM allows IT administrators to quickly and easily configure monitoring, reporting, and analysis of network performance. The NPM application monitors and reports on performance such as bandwidth, latency, jitter, packet loss, and delay. It's very easy to setup and configure. NPM provides a virtual machine that allows you to easily monitor your production servers without requiring changes to hardware or software. The NPM virtual machine is fully managed so you don't have to do anything to get it running. No changes to servers or network configuration are required to use NPM. All technical and company information is proprietary to SolarWinds and its suppliers. All other trademarks are the property of their respective owners. "I absolutely love this product and it makes all of our Linux Virtual Machines a complete breeze to set up and manage. It is by far the easiest way to manage a set of VMs. I can count on it to get me back on track and deliver the performance necessary to keep the business running as smoothly as possible." Our User Reviews My name is Steven. I am a computer scientist and I love to play games. It's been more than 5 years since I tried to configure an installation of Windows XP on a VirtualBox, and it was such a horrible experience that I don't want to g
